

Exp 5: Building Reports, Dashboards, and Custom Pages (UI Builder) for the Application

Register Number: 241401127

1. Aim

To design and construct multiple specialized report views — a Kanban report grouped by Loan Type for operational triage, and a Calendar report for tracking application submission dates — on top of the Loan_Application_Form, and to build an interactive custom Dashboard page using Zoho Creator's UI Builder (Page Builder) equipped with real-time KPI metrics, analytical charts (Employment Type Donut Chart, Loan Type Bar Chart), and an embedded live report view for loan officers.

This addresses the bank's operational requirement of moving beyond a flat list of loan applications to visual, role-friendly management views that enable loan officers to monitor daily applications, spot patterns across loan categories, and track applicant volume without opening individual records.

2. Procedure

2.1 Create and Configure the Kanban Report ("Loan_Type_Kanban")

A new report named Loan_Type_Kanban was created on top of the Loan_Application_Form, and its layout type was set to Kanban in the Report Builder palette.

2.2 Configure Kanban Grouping and Card Display Properties

In the Kanban Report Builder properties drawer, Group Columns By was bound to the picklist field Loan_Type so that each board column represents a distinct loan category (Home Loan, Personal Loan, Business Loan, Auto Loan, and Education Loan). Primary card headers were configured to display Applicant_Name, accompanied by sub-fields including Employment_Type, Monthly_Income, Contact_Number, and Preferred_Callback_Time.

2.3 Live Published Kanban Report — "Loan_Type_Kanban"

The published live Kanban report categorizes submitted loan applications into columns based on loan type. Each card presents the applicant's name, date of birth, email, and contact details under Home Loan, Personal Loan, Auto Loan, and Education Loan categories.

2.4 Create and Configure the Calendar Report ("Application_Received_Calendar")

A second report named Application_Received_Calendar was added to the application, with its view type configured as Calendar for tracking loan application submission dates across day, week, and month grids. Since the form does not contain a dedicated scheduling date field, the Calendar was bound to the system-generated Added_Time field, giving loan officers a day-by-day view of incoming applications.

2.5 Configure Calendar Event Field Bindings

In the Calendar Properties panel, the Event title parameter was bound to Applicant_Name, while both Event starts on and Event ends on were bound to Added_Time. The default initial view was set to Month View.

Report as a Calendar

Based on the form:

Event title:

Event dates:

Event starts on:

Event ends on:

Name report:

2.6 Live Published Calendar Report — "Application_Received_Calendar"

The published calendar report displays the August 2026 grid in Month view. Submitted loan applications (Suresh Raghavan on 18-Aug-2026, and Priya Natarajan, Arvind Kumar, and Meena Subramaniam on 25-Aug-2026) are plotted directly on their respective submission dates.

Application_Received_Calendar

Month | Week | Day

August, 2026

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
16	17	18 Suresh Raghavan	19	20	21	22
23	24	25 Priya Natarajan Arvind Kumar Meena Subramaniam	26	27	28	29
30	31	1	2	3	4	5

2.7 Launch Page Builder (UI Builder) for Custom Dashboard

A new custom page named Loan_Officer_Dashboard was created in Zoho Creator using the Page Builder (UI Builder). The Page Builder environment exposes a comprehensive component palette comprising Panel, Board, Chart, Gauge, Search, Form, Report, Snippets, and Button.

2.8 Add Operational KPI Metric Tiles

Four high-level Key Performance Indicator (KPI) metric tiles were added to the dashboard canvas to display real-time counters: Total Applications, Salaried Applicants, Self-Employed Applicants, and Home Loan Applications — each configured as a Count aggregate on Loan_Application_Form with the relevant filter criteria.

2.9 Add Analytical Chart Widgets

- Donut Chart ("Employment Type Distribution"): Configured to source data from Loan_Application_Form and group applicant counts by Employment_Type (Salaried, Self-Employed).
- Bar Chart ("Loan Type Volume"): Configured to plot applicant volume against Loan_Type (Home Loan, Personal Loan, Business Loan, Auto Loan, Education Loan).

2.10 Embed Live Data Table Grid

A Report Widget bound to Loan_Application_Form Report was placed at the bottom of the page canvas, enabling loan officers to review detailed applicant record rows directly from the dashboard view.

3. Output

The following figures show the live published Loan_Officer_Dashboard, combining the KPI header, analytical charts, and embedded live data table:

4. Result / Observations

Multiple specialized report views and an interactive custom Dashboard page were successfully built and verified in Zoho Creator for the Loan Application & Pre-Screening Management application:

- A Kanban Report (Loan_Type_Kanban) was created and grouped by Loan_Type, enabling loan officers to visually track applications across Home Loan, Personal Loan, Business Loan, Auto Loan, and Education Loan categories.
- A Calendar Report (Application_Received_Calendar) was configured and date-bound to Added_Time, providing a month/week view for tracking when loan applications were submitted.
- A custom Dashboard page (Loan_Officer_Dashboard) was built with 4 real-time KPI tiles, a Donut chart of employment type distribution, a Bar chart of loan type volume, and an embedded live report table — giving loan officers a single consolidated operational view.

All report configurations and dashboard widgets were verified in live mode using 5 sample applicant records, confirming that low-code reporting and UI Builder tools effectively enhance business visibility for loan pre-screening without custom pro-code scripting.
