

Exp 5: Building Reports, Dashboards, and Custom Pages (UI Builder) for the Application

Register Number: 241401127

1. Aim

To build a Kanban report grouped by loan type, a Calendar report of application submission dates, and a custom dashboard page using Zoho Creator's Page Builder (KPI tiles, a donut chart, a bar chart and an embedded report) for the Loan Application & Pre-Screening Management application, so that loan officers get visual views of the applications without opening individual records.

2. Procedure

2.1 Reports and Dashboard Plan

Component	Type	Purpose
Loan_Type_Kanban	Kanban report on Loan_Application_Form, columns grouped by Loan_Type	Shows each application as a card under its loan type for quick triage.
Application_Received_Calendar	Calendar report with events bound to Added_Time	Shows on which dates applications were submitted.
Loan_Officer_Dashboard	Custom page built in Page Builder: four KPI tiles, a donut chart, a bar chart and an embedded report	Gives loan officers one consolidated view of the application data.

2.2 Kanban Report — Loan_Type_Kanban

A report named Loan_Type_Kanban was created on Loan_Application_Form with the Kanban layout. In Kanban Properties, Group Columns By is set to Loan_Type, so each column is a loan type. Empty and deleted value columns are hidden and the record count is shown for each column.

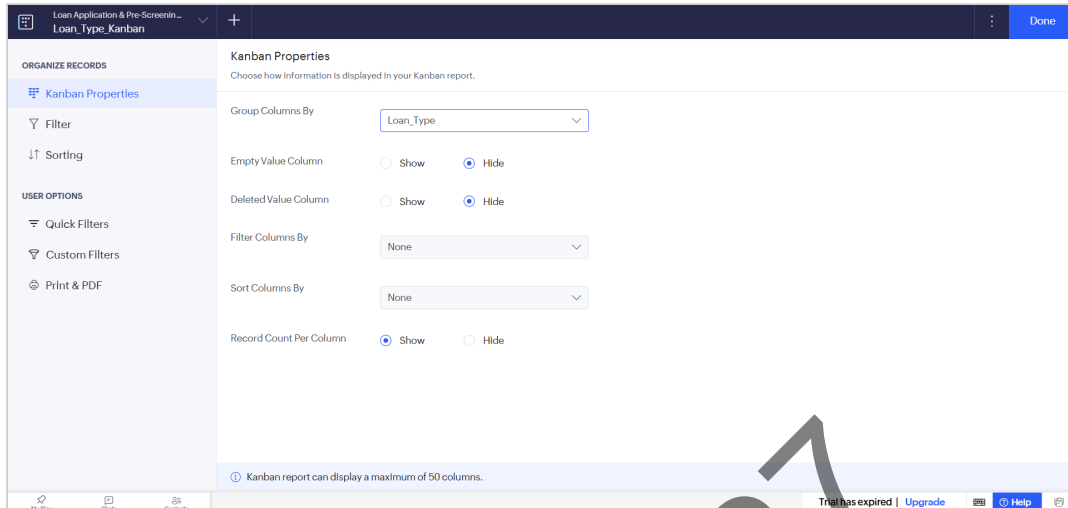

Figure 1: Kanban Properties — Group Columns By set to Loan_Type

In Configure Fields, Applicant_Name is the card header, with Employment_Type, Monthly_Income, Contact_Number and Preferred_Callback_Time shown beneath it.

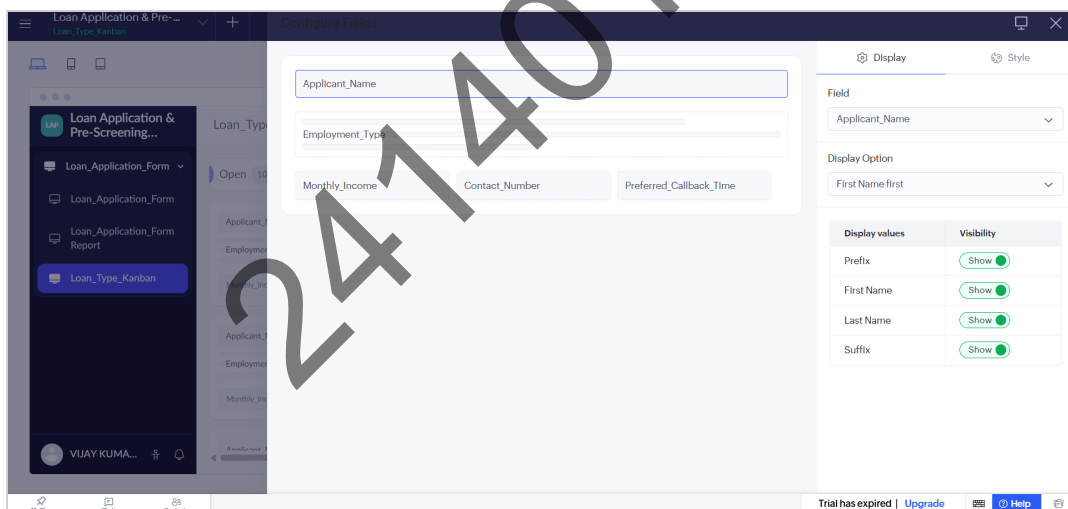

Figure 2: Configure Fields — card layout for the Kanban report

2.3 Calendar Report — Application_Received_Calendar

A second report was created with the Calendar layout. The form has no scheduling date field (its only Date field is Date_Of_Birth), so both Event starts on and Event ends on use the system field Added Time, the moment each application was submitted. Event title is Applicant_Name.

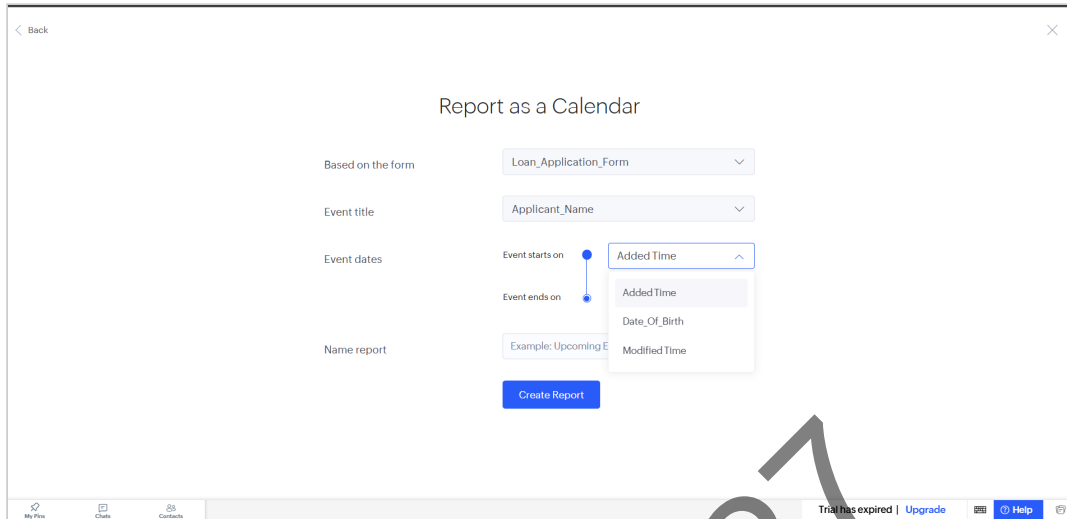

Figure 3: Report as a Calendar — event title and event dates

2.4 Dashboard Page — Loan_Officer_Dashboard

A new page was created in Page Builder using the Blank option and named Loan_Officer_Dashboard. The component palette offers Panel, Board, Chart, Gauge, Search, Form, Report, Snippets and Button; the Panel templates were used for the KPI tiles.

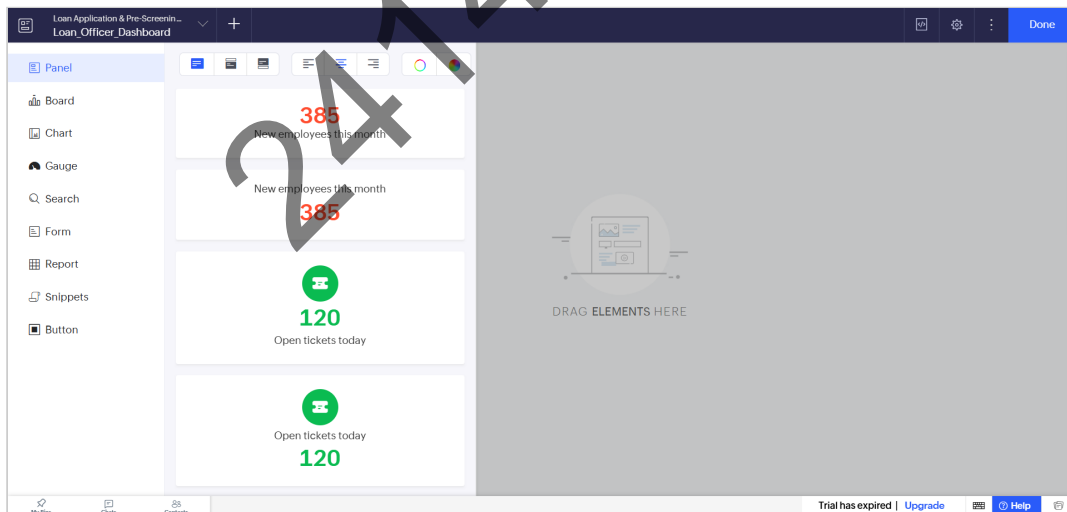

Figure 4: Page Builder — component palette with Panel templates and an empty canvas

Each KPI tile is a Panel whose Display data is set to Count on Loan_Application_Form.

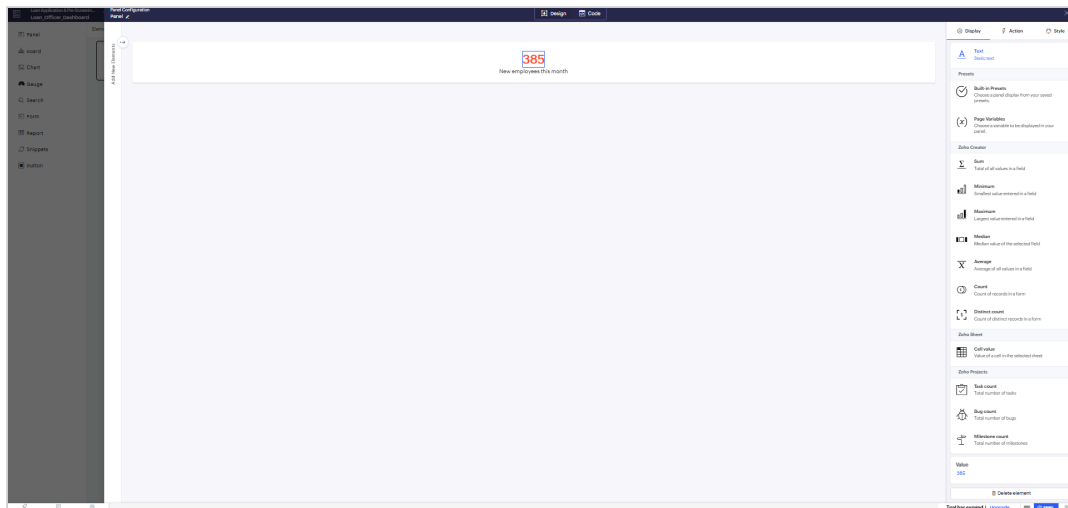

Figure 5: Panel configuration — Count of records in a form

The first tile counts all records. The other tiles use the "Selected records" criteria option with a field, operator and value, for example Employment_Type equal to Salaried.

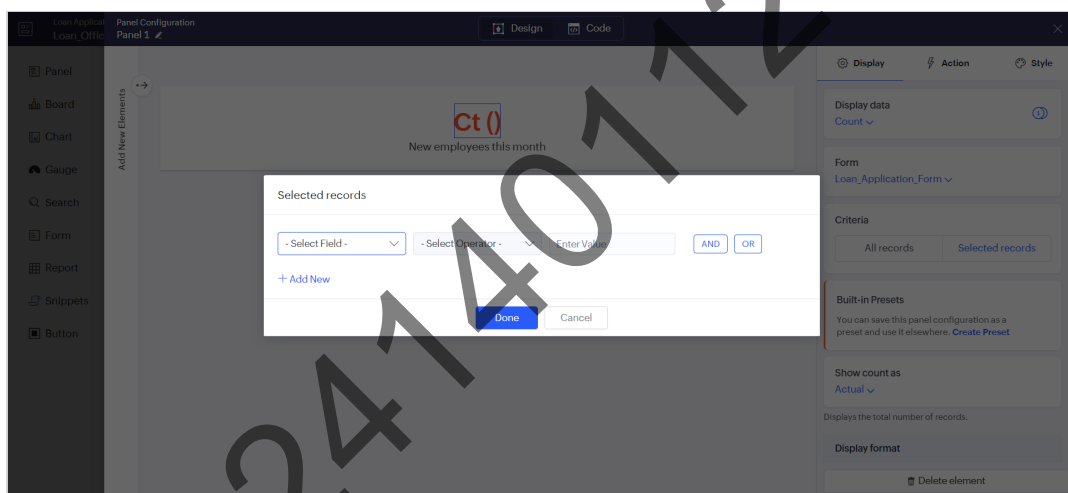

Figure 6: Criteria for a KPI tile — Selected records

The four tiles are Total Applications, Salaried Applicants (Employment_Type = Salaried), Self-Employed Applicants (Employment_Type = Self-Employed) and Home Loan Applications

(Loan_Type = Home Loan). In the builder they show a Count placeholder and display the real values once the page is published.

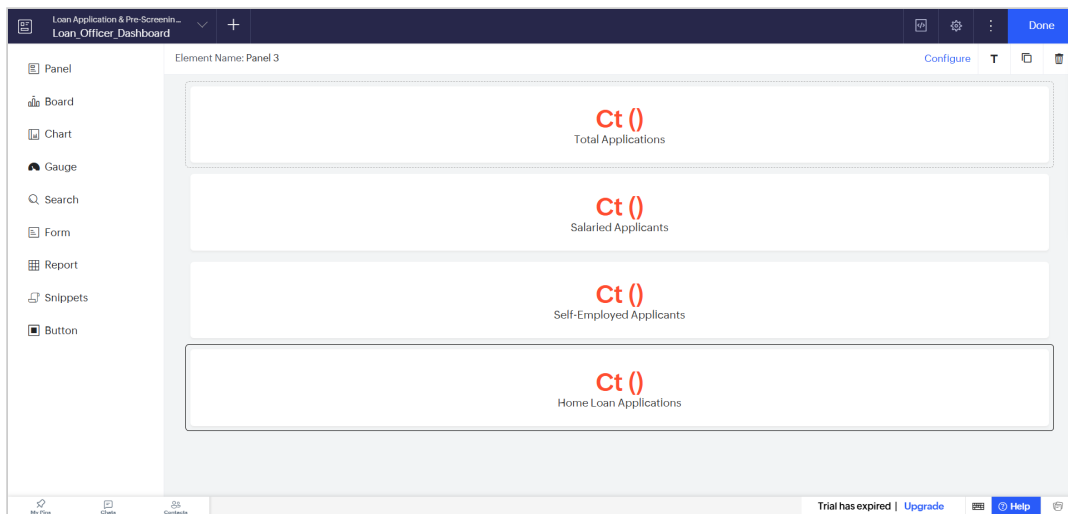

Figure 7: The four KPI tiles on the dashboard canvas

Two charts were added from the Chart component. In Chart Configuration the form is Loan_Application_Form, the X-axis category is the grouping field, and the Y-axis uses Aggregate with Count over all records. The donut chart groups by Employment_Type and the bar chart (plain Bar type) groups by Loan_Type.

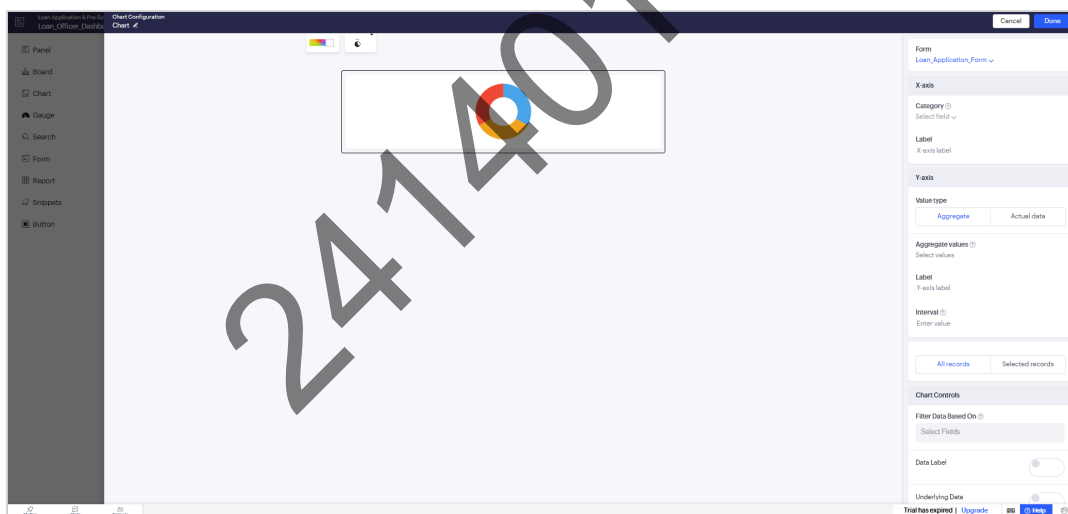

Figure 8: Chart Configuration — form, X-axis category and Y-axis aggregate

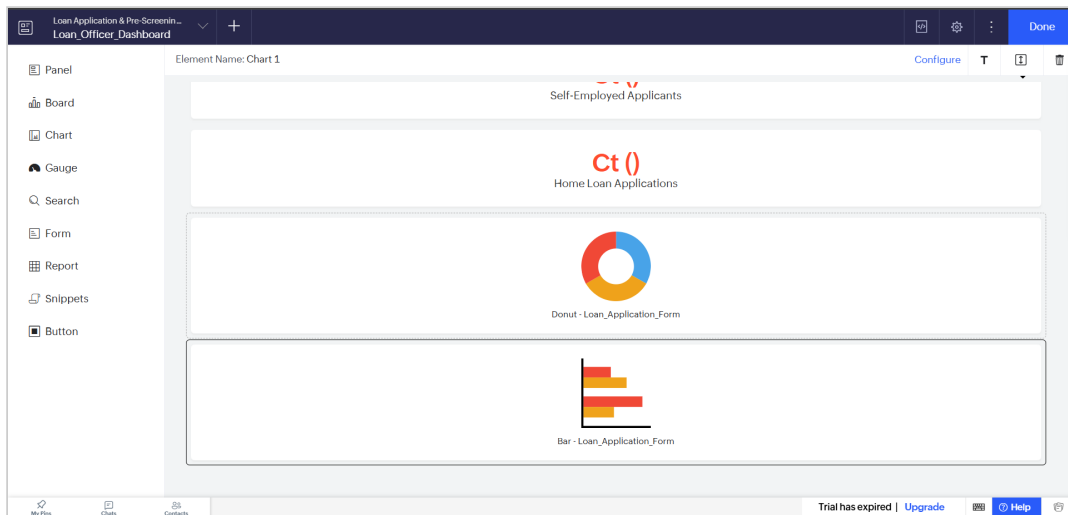

Figure 9: Donut chart and bar chart placed on the dashboard canvas

Finally, a Report component was added with "Embed as report" and bound to Loan_Application_Form Report, so the records can be read from the dashboard.

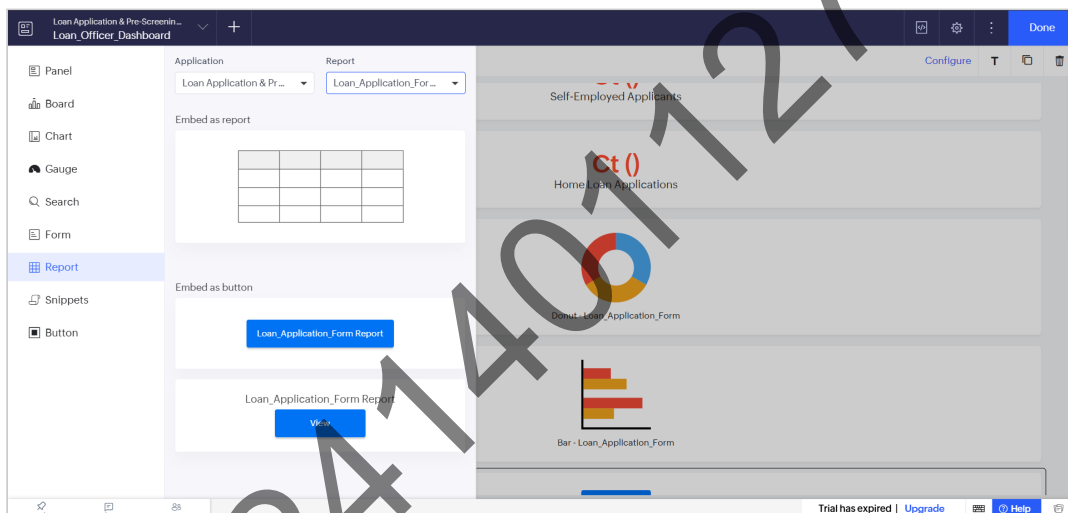

Figure 10: Embedding Loan_Application_Form Report on the dashboard

3. Testing and Verification

Each component was opened in live mode and checked against the five records listed in Loan_Application_Form Report ("Showing 5 of 5").

#	Component	Check	Observed	Result
1	Kanban report	Each applicant appears under their own loan type	Home Loan 1, Personal Loan 3, Auto Loan 1, which totals the five records (Figure 11)	Pass
2	Calendar report	Applicants are plotted on their submission dates	Suresh Raghavan on 18-Aug-2026; Priya Natarajan, Arvind Kumar and Meena Subramaniam on 25-Aug-2026 (Figure 12)	Pass

#	Component	Check	Observed	Result
3	KPI tiles	Counts match the data	Total 5, Salaried 3, Self-Employed 2, Home Loan 1 (Figure 13)	Pass
4	Donut and bar charts	Slices and bars match the tile counts	Donut splits Salaried and Self-Employed; bars show Auto Loan 1, Personal Loan 3, Home Loan 1 (Figure 14)	Pass
5	Embedded report	All records are listed	Table shows all applicants, "Showing 5 of 5" (Figure 15)	Pass

4. Output

The following figures show the final reports and the published dashboard.

Kanban report: applicants are grouped into columns by loan type.

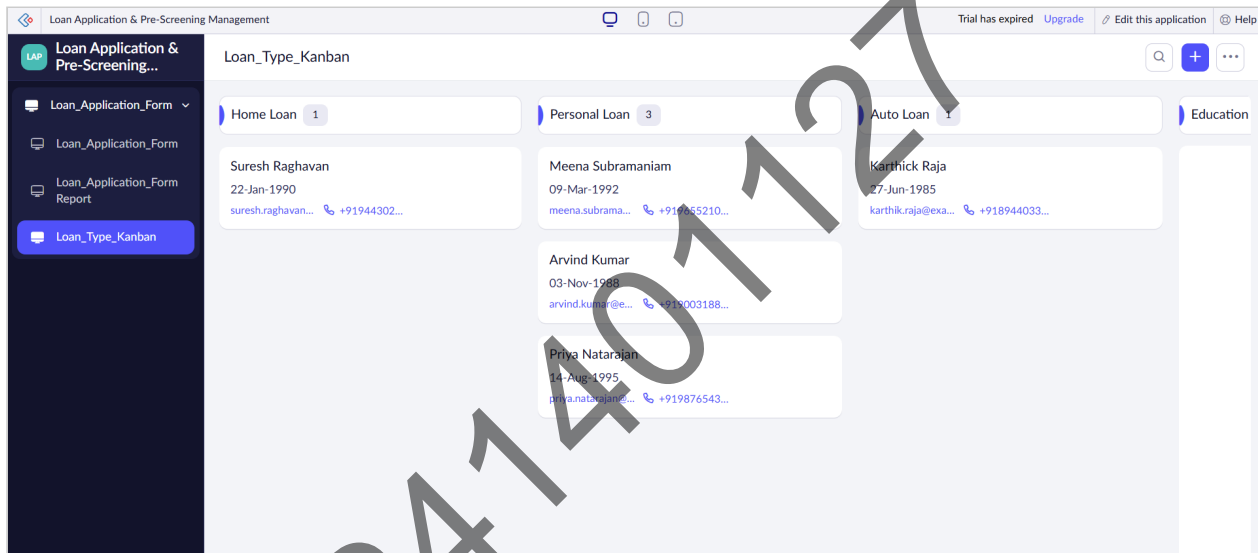

Figure 11: Live Loan_Type_Kanban report grouped by loan type

Calendar report: the August 2026 month view with applicants on their submission dates.

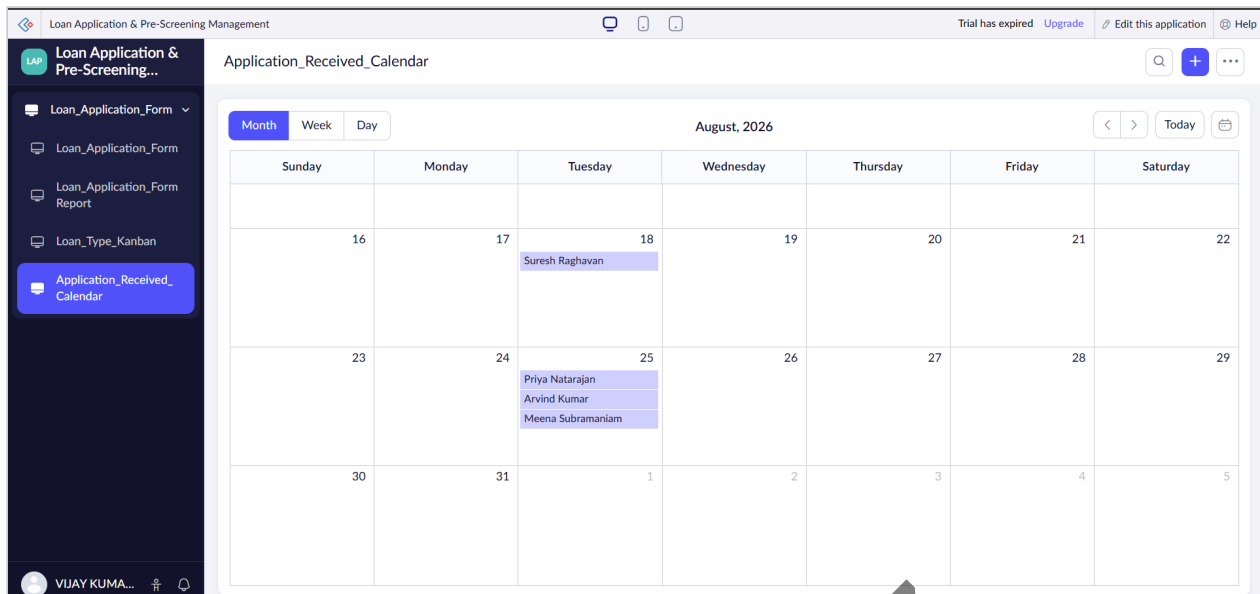

Figure 12: Live Application_Received_Calendar — Month view

Dashboard: the published Loan_Officer_Dashboard, from the KPI tiles down to the embedded report.

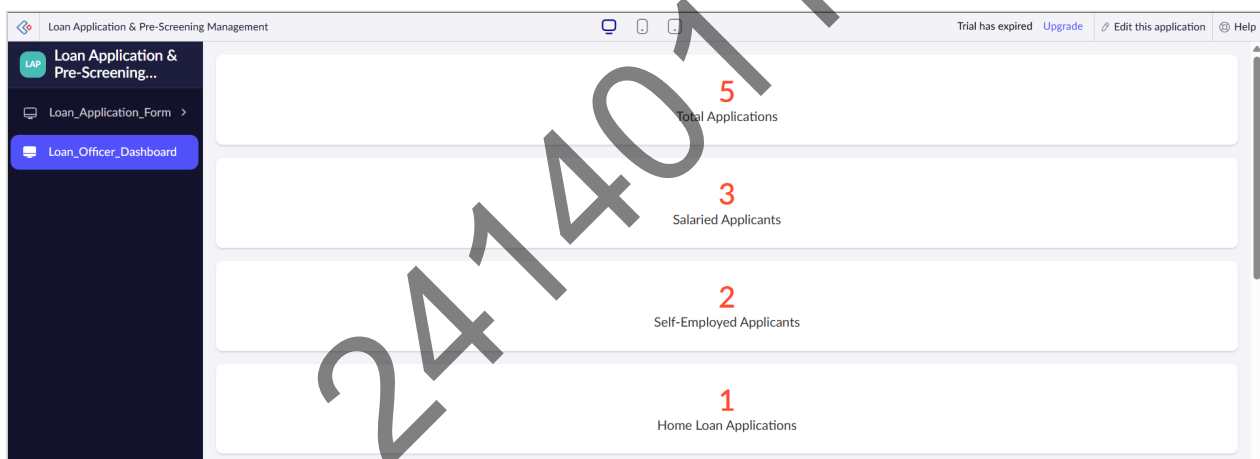

Figure 13: Loan_Officer_Dashboard — KPI tiles

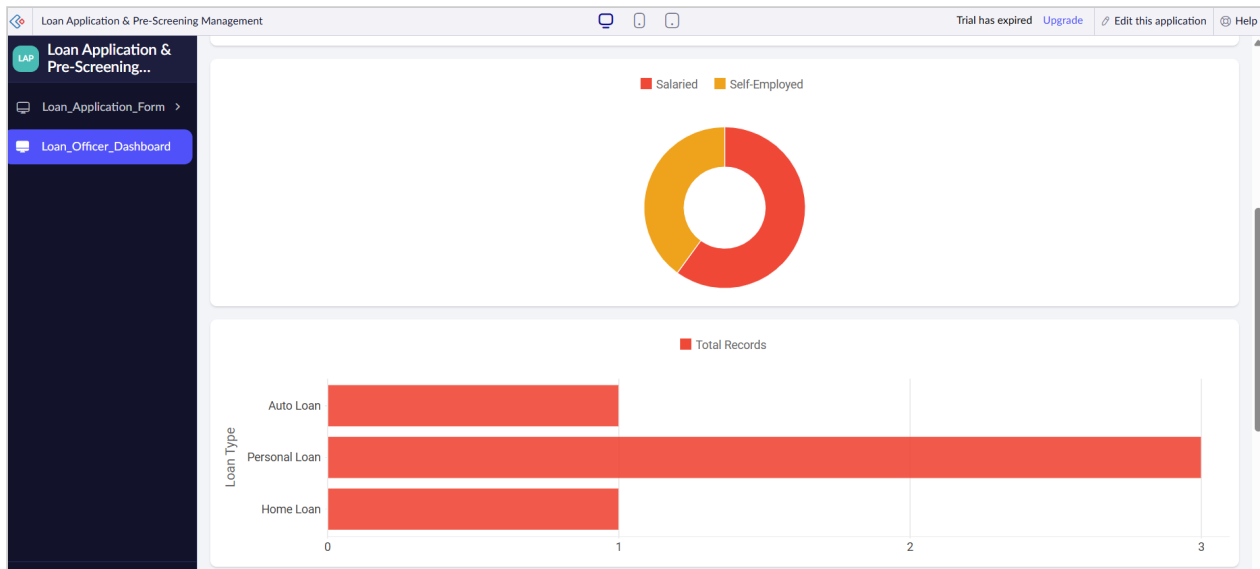

Figure 14: Loan_Officer_Dashboard — Employment Type donut chart and Loan Type bar chart

The dashboard displays an embedded report titled 'Loan_Application_Form Report'. The report shows a list of loan applications with columns for Applicant Name, Date of Birth, PAN Number, Email Address, Contact Number, and Residential Address.

Applicant Name	Date Of Birth	PAN Number	Email Address	Contact Number	Residential Address
Karthick Raja	27-Jun-1985	EFGHI6789M	karthik.raja@example.com	+918944033221	7, Race Course Road,, Coimbatore, Tamil Nadu, 641010, India
Meena Subramaniam	09-Mar-1992	DXNQR3345L	meena.subramaniam@example.com	+919655210987	22, Kamaraj Nagar,, Madurai, Tamil Nadu, 625001, India

5. Result

A Kanban report by loan type, a calendar report of submission dates, and a custom dashboard with four KPI tiles, two charts and an embedded report were built in Zoho Creator and verified against the sample records.
